CONTENTS

FACILITATION AS A TOOL TO STUDY THE ENTRY OF CALCIUM AND THE MECHANISM OF NEUROTRANSMITTER RELEASE 1
H. PARNAS* and L. A. SEGEL†, *Department of Neurobiology, Hebrew University, Jerusalem, Israel and †Department of Applied Mathematics and Computer Science, Weizmann Institute, Rehovot, Israel

NEUROCHEMICAL TRANSMISSION AND THE SODIUM-PUMP 11
T. L. TÖRÖK, Department of Pharmacodynamics, Semmelweis University of Medicine, H-1089 Budapest, P.O.B. 370, Hungary

ANALYSIS OF RECURRENT INHIBITORY CIRCUIT IN RAT THALAMUS: NEUROPHYSIOLOGY OF THE THALAMIC RETICULAR NUCLEUS 77
A. SHOSAKU,* Y. KAYAMA,† I. SUMITOMO,‡ M. SUGITANI§ and K. IWAMA ||, *Department of Neurophysiology, Institute of Higher Nervous Activity, Osaka University Medical School, Osaka 530, Japan, †Department of Physiology, Akita University School of Medicine, Akita 010, Japan, ‡Laboratory of Biological Science, Osaka Keizai University, Osaka 533, Japan, §Department of Physiology, Kanazawa Medical University, Uchinada, Ishikawa 920–02, Japan and ||Physiological Laboratory, Kinki University Faculty of Pharmacy, Higashi-Osaka 577, Japan

TEMPERATURE-SENSITIVE NEURONS IN THE HYPOTHALAMUS: A NEW HYPOTHESIS THAT THEY ACT AS THERMOSTATS, NOT AS TRANSDUCERS 103
S. KOBAYASHI, Laboratory of Biomechanics and Physiology, College of Liberal Arts, Kyoto University, Sakyo-ku Kyoto 606, Japan

ON THE EVOLUTION AND GEOMETRY OF THE BRAIN IN MAMMALS 137
M. A. HOFMAN, Netherlands Institute for Brain Research, Meibergdreef 33, 1105 AZ Amsterdam, The Netherlands

DYNAMIC CHANGES IN SODIUM CHANNELS AT DEMYELINATED AXONS 159
H. MEIRI, Z. BAUM and Y. ROSENTHAL, Department of Physiology and Biophysics, Faculty of Medicine and the Rappaport Family Institute for Research in the Medical Sciences, Technion-Israel Institute of Technology, POB 9697, Haifa 31096, Israel

DEVELOPMENT OF THE LATERAL LINE SYSTEM IN *XENOPUS* 181
R. WINKLBAUER, Max-Planck-Institut für Entwicklungsbiologie, Spemannstrasse, 35/V, 7400 Tübingen, F.R.G.

CONTROL OF CELL NUMBER IN THE DEVELOPING MAMMALIAN VISUAL SYSTEM 207
B. L. FINLAY and S. L. PALLAS, Department of Psychology and Section of Neurobiology and Behavior, Cornell University, Ithaca, NY 14853, U.S.A.

PLASTICITY IN THE NEOCORTEX: MECHANISMS UNDERLYING RECOVERY FROM EARLY BRAIN DAMAGE 235
B. KOLB and I. Q. WHISHAW, Department of Psychology, University of Lethbridge, Lethbridge, AB, Canada, T1K 3M4

IN SEARCH OF CELLULAR MECHANISMS OF MEMORY 277
H. MATTHIES, Institute of Neurobiology and Brain Research, Academy of Sciences of G.D.R., Magdeburg and Institute of Pharmacology and Toxicology, Medical Academy Magdeburg, 3090 Magdeburg, G.D.R.

AREA POSTREMA: CHEMORECEPTOR CIRCUMVENTRICULAR ORGAN OF THE MEDULLA OBLONGATA 351
H. L. BORISON, Department of Pharmacology and Toxicology, Dartmouth Medical School, Hanover, NH 03756, U.S.A.

NEUROCHEMICAL AND COGNITIVE ASPECTS OF ANXIETY DISORDERS 391
A. KIDMAN, Neurobiology Unit, University of Technology, Sydney, Gore Hill, N.S.W. 2065, Australia

DRUG EFFECTS ON ACTIVE IMMOBILITY RESPONSES: WHAT THEY TELL US ABOUT NEUROTRANSMITTER SYSTEMS AND MOTOR FUNCTIONS 403
W. R. KLEMM, Laboratory of Neuroscience, Department of Veterinary Anatomy, Texas A & M University, College Station, TX 77843, U.S.A.

INSECT ACETYLCHOLINESTERASE: CATALYTIC PROPERTIES, TISSUE DISTRIBUTION AND MOLECULAR FORMS 423
J.-P. TOUTANT, Department of Pharmacology, Case Western Reserve University, 44106 Cleveland, OH, U.S.A.

THE EFFECTS OF METHYLMERCURY ON THE DEVELOPING BRAIN 447
B. H. CHOI, Division of Neuropathology, Department of Pathology, University of California at Irvine, Irvine, CA 92717, U.S.A.

TAURINE IN THE CENTRAL NERVOUS SYSTEM AND THE MAMMALIAN ACTIONS OF TAURINE 471
R. J. HUXTABLE, Department of Pharmacology, College of Medicine, University of Arizona, Tucson, Arizona 85724, U.S.A.

CONTENTS

OPIOIDS AND RESPIRATION 1
M. YEADON and I. KITCHEN, Department of Biochemistry, Molecular Toxicology and Pharmacology Group, University of Surrey, Guildford, Surrey GU2 5XH, U.K.

SCHIZOPHRENIA AS A PROGRESSIVE DISORDER: RELATIONS TO EEG, CT, NEUROPATHOLOGICAL AND OTHER EVIDENCE 17
R. MILLER, Department of Anatomy and Neuroscience Centre, University of Otago Medical School, P.O. Box 913, Dunedin, New Zealand

ACTH MODULATION OF NERVE DEVELOPMENT AND REGENERATION 45
FLEUR L. STRAND, KENNETH J. ROSE, JEAN A. KING, ANNABELL C. SEGARRA and LISA A. ZUCCARELLI, Department of Biology, New York University, Washington Square, New York, NY 1003, U.S.A.

NERVE REGENERATION THROUGH ARTIFICIAL TUBULAR IMPLANTS 87
R. DOUGLAS FIELDS,* JEAN M. LE BEAU,† FRANK M. LONGO‡ and MARK H. ELLISMAN§, *Laboratory of Developmental Neurobiology, NICHD, National Institutes of Health, Building 36, Room 2A21, Bethesda, MD 20892, U.S.A., †Department of Pathology, University of California, San Diego, CA, U.S.A., ‡Department of Neurology, University of California, San Francisco, CA, U.S.A. and §Laboratory of Neurocytology, University of California, San Diego, CA, U.S.A.

NERVOUS REGULATION OF METABOLISM 135
AKIRA NIIJIMA, Department of Physiology, Niigata University, School of Medicine, Niigata 951, Japan

ROLE OF OPIOID NEUROPEPTIDES IN IMMUNOREGULATION 149
GEORGE B. STEFANO, Multidisciplinary Center for the Study of Aging, SUNY/College at Old Westbury, Old Westbury, NY 11568, U.S.A.

FUNCTIONAL ORGANIZATION OF THE EXTRINSIC AND INTRINSIC CIRCUITRY OF THE PARAHIPPOCAMPAL REGION 161
M. P. WITTER,* H. J. GROENEWEGEN,* F. H. LOPES DA SILVA† and A. H. M. LOHMAN,* *Department of Anatomy and Embryology, Medical Faculty, Vrije Universiteit, van der Boechorststraat 7, 1081 BT Amsterdam, The Netherlands and †Workshop Neurophysiology, Department of Experimental Zoology, Biological Centre, University of Amsterdam, Kruislaan 320, 1098 AM Amsterdam, The Netherlands

THE PHARMACOLOGY OF SEGMENTAL TRANSMISSION IN THE SPINAL CORD 255
R. H. EVANS, Department of Pharmacology, Medical School, University Walk, Bristol BS8 1TD, U.K.

SENSORIMOTOR GAIN CONTROL: A BASIC STRATEGY OF MOTOR SYSTEMS? 281
ARTHUR PROCHAZKA, Department of Physiology, University of Alberta, Edmonton, Alta T6G 2H7, Canada

ROLE OF GLIAL CELLS IN THE REGULATION OF THE BRAIN ION MICROENVIRONMENT 309
WOLFGANG WALZ, Department of Physiology, College of Medicine, University of Saskatchewan, Saskatoon, SK S7N 0W0, Canada

CALCITONIN GENE-RELATED PEPTIDE IN THE NERVOUS TISSUE 335
AKEMI ISHIDA-YAMAMOTO and MASAYA TOHYAMA, Department of Anatomy II, Osaka University Medical School, 4–3–57 Nakanoshima, Kitaku, Osaka 530, Japan

HUMAN EEG AND ODOR RESPONSE 387
TYLER S. LORIG, Department of Psychology, Washington and Lee University, Lexington, VA 24450, U.S.A.

NEUROENDOCRINE REGULATION OF PROLACTIN RELEASE 399
NIRA BEN-JONATHAN, LYDIA A. ARBOGAST and JAMES F. HYDE, Department of Physiology and Biophysics, Indiana University School of Medicine, 635 Barnhill Drive, Indianapolis, IN 46223, U.S.A.

INDEX

Acetylcholine
  in area postrema 360
  calcium-dependent release 13
  calcium-independent release 34
  sodium pump and release of 29
Acetylcholinesterase, insect 423–446
  catalytic properties 424
  molecular polymorphism 431
  tissue and cellular distribution 428
Acoustico–facialis complex 182
Active immobility responses 403–422
  cholinergic influences 408
  dopaminergic influences 404
  GABA 412
  histamine 412
  interaction among neurotransmitter systems 413, 417
  multiplicity of transmitter systems 416
  noradrenergic influences 409
  opiatergic influences 411
  peptides 412
  serotonergic influences 410
Adenosine-3′,5′-monophosphate, taurine interactions 505
Na^+,K^+-Adenosine triphosphatase, Na^+ and K^+ interaction sites 19
Adrenal gland
  calcium-dependent neurotransmitter release 16
  sodium pump and catecholamine release 32
Adrenaline, in area postrema 361
α-Adrenergic receptors, immobility responses 409
α_2-Adrenergic receptors, mediated presynaptic autoinhibition during sodium-pump blockade 52
Adrenergic system, taurine interaction 509
Afferent control of cell number
  retina 213, 226
  visual cortex 219, 220
Afferent and efferent convergence ratios 220
β-Alanine, taurine depletion 498
Allometry
  brain size 139
  cortical design 141
Amacrine cells, control of cell number 215
γ-Aminobutyric acid
  in area postrema 362
  role in anxiety 396
  role in immobility responses 412, 416
  taurine interactions 488, 506
  thalamic reticular nucleus 93
Angiotensin II, central pressor action and area postrema 377
Angiotensin II receptors, in area postrema 363
Anisomycin
  long-term potentiation 308, 335
  effect on memory 287, 306
Anorexia, role of area postrema 372
Antidepressants, anxiety treatment 397
Anxiety disorders 391–402
  definition 392
  models and theories 394
  treatment, drugs 396
  treatment, psychotherapy 397
Apomorphine
  emetic response 366
  induced catalepsy 407, 415
Area postrema 351–390
  arousal 373
  cardiovascular control system 374
  circumventricular organ system 352
  control of dietary intake 368
  emetic control system 364
  metabolic effects 372
  morphology 353
  neurochemistry 360
  neurones and neural connections 358
  respiratory control system 373
Arginine–vasopressin, effect on area postrema 380
Arousal, influence of area postrema 373
Arrhythmogenesis, role of area postrema 380
Aspartate, in area postrema 362
Astrocytes, effects of methylmercury 456
Auditory cortex, effect of cortical lesions 267
Axons
  potassium channels 161
  sodium channels 160

Barbiturates, anxiety treatment 397
BAY K 8644, effect on noradrenaline release 15
Behaviour
  anatomical change and sparing 268
  anatomical correlates of early cortical lesions 247
  consequences of early cortical lesions 238
  environment 245
  noradrenaline 245
  sex 246
  sparing 237, 268
Behavioural assessment of the rat 238
Behavioural development, methylmercury effects 463
Behavioural thermoregulation 131
Behaviour therapy, anxiety disorders 399
Benzodiazepines, anxiety treatment 397
Beta-blockers, anxiety treatment 397
Bipolar cells, control of cell number 215
Blood pressure, role of area postrema 375
Bradykinin, role of area postrema in central pressor action 380
Brain–body size scaling 139, 141
Brain damage 235–276
  anatomical consequences of early cortical lesions 247
  behavioural consequences of early cortical lesions 238
  restitution of function 237
Brain size, evolution 137–158
  geometry of cerebral cortex 145
  intelligence 139
  mathematical models of cortical folding 146
  size and scaling of cerebral cortex 141
Brainstem, thalamic reticular nucleus connections 79, 83
Brightness discrimination 280

Calcium
  dependent neurotransmitter release 12
  facilitation and the role of 1–9
  independent transmitter release 34
  internal stores 34

role in induction of LTP 307
stimulation of sodium pump 48
taurine interactions 491, 499
Calcium currents, effect of taurine 504
Calmodulin, role in LTP 310
Cardiac glycosides 11
promotion of Ca^{2+}-dependent transmitter release 41
sensitivity of Na^{+}-pump 19
Cardiovascular control system, role of area postrema 374
Catalepsy, drug effects 403–422
Catecholamines
in area postrema 361
calcium-dependent release 16
sodium pump and release of 30
Cell death in visual system 214, 218, 224
Cerebral cortex
evolutionary expansion 137
geometry 145
mathematical models of folding 146
size and scaling 141
Chemoreception, insects, acetylcholinesterase 430
Chloride currents, effect of taurine 504
Cholecystokinin
in area postrema 363
induced catalepsy 412
Cholineacetyltransferase, in insects 428
Cholinergic–dopaminergic interaction, immobility responses 413
Cholinergic influences on immobility responses 408
Cholinergic influences on thalamic reticular nucleus neurons 84
Cholinergic–noradrenergic interaction, immobility responses 413
Cholinergic system, taurine interaction 510
Cholinesterase, insects 424
Circumventricular organ system, area postrema 352
Cognitive behaviour therapy, anxiety disorders 400
Cold-sensitive neurons in hypothalamus 106, 111
Conditioned taste aversion, role of area postrema 369
Cortical folding 138, 141, 145, 146
biomechanical models 149
computer models 153
geometric scaling models 152
Corticofugal axons, thalamic reticular nucleus 79, 82
Cysteine dioxygenase, in brain, taurine synthesis 475, 477, 483
Cysteine sulfinic acid decarboxylase, in brain, taurine synthesis 474, 477, 480
Cystic acid decarboxylase, in brain, taurine synthesis 483

Demyelinated axons 159
nerve conduction 162
sodium channels 165
Demyelinating diseases 162
sodium channel distribution 171
Dendritic arborization, early cortical lesions 256, 262, 269
Deoxyribonucleic acid, methylmercury effects on synthesis in fetal astrocytes 456
Development
cell number control in visual system 207–234
cortical, biomechanical models 149
insects, acetylcholinesterase molecular forms 438
methylmercury effects on brain 447–470
plasticity in the neocortex 235–276
rat brain 248
taurine in brain 474, 512
Diazepam binding inhibitior 396
Diet, taurine in 498
Dietary intake, role of area postrema 368
Dopamine
in area postrema 361
stimulated fucosylation, memory formation 296
taurine interactions 508
Dopaminergic–cholinergic interaction, immobility responses 413
Dopaminergic influences on immobility responses 404
Dorsal lateral geniculate nucleus 77
relay neurons 78
Dynorphins, in area postrema 363
Dystrophic mice, sodium channel distribution 171

Electroconvulsive shock, amnesic effect 278, 281
Electroencephalogram, effect of early cortical lesions 265
Electroencephalogram spindle activity, thalamic reticular nucleus 98
Emetic receptor function of area postrema 352
antiemetic drugs 367
conditioned taste aversion 369
emetic agents 365
motion sickness 367
radiation sickness 367
species differences 364
Encephalization 140, 209
Enkephalins in area postrema 363
Environment
influence on behaviour after neonatal cortical lesions 245
effect on morphological development after neonatal cortical lesions 267
Etorphine, induced catalepsy 411
Evolution
brain size 137–158
visual system 208, 228
Excitatory amino acid receptors, role in methylmercury toxicity 464
Exercise, thermoregulation 132
Exocytosis, neurotransmitter release induced by Ca^{2+} 43

Facilitation, role of calcium 1–9
Feeding behaviour, role of area postrema 368
Fever, thermoregulation 132
Fish, methylmercury in 448
Frontal cortex lesions
anatomical consequences 256
behavioural consequences 243
Fucokinase 299
Fucose, incorporation into glycoproteins, memory formation 289, 296, 320

Ganglion cells, sodium pump 21
Generalized anxiety disorder 392
Giant axons, sodium pump 21
Glossopharyngeal complex 183
Glucose, role of area postrema in regulation 372
Glutamate
  in area postrema 362
  taurine interaction 510
Glutamate receptors, role in methylmercury toxicity 464
Glycine
  in area postrema 362
  taurine interaction 508
Glycoprotein synthesis and memory 289, 296, 320
Growth hormone, taurine interaction 511
Guanidinoethane sulfonate 497
Gustatory cortex lesions 242

Heart, sodium pump 23
Hippocampal rhythmic slow activity, memory formation 323, 329, 337
Hippocampus
  dopamine-stimulated fucosylation 297
  macromolecule synthesis and memory 283
Histamine
  in area postrema 362
  role in immobility response 412, 415, 416
Hydrocephalus, prenatal methylmercury poisoning 463
5-Hydroxytryptamine
  in area postrema 361
  role in immobility responses 410
  taurine interaction 509
5-Hydroxytryptophan evoked emesis 366
Hypotaurine dehydrogenase, in brain 482
Hypothalamus, thermosensitive neurons as thermostats 103–135

Ileum, sodium pump 24
Immobility responses, drug effects 403–422
Ingestive behaviour, role of area postrema 368
Insects, acetylcholinesterase 423–446
Insulin receptors in area postrema 363
Intelligence and brain size 139
Intrageniculate interneurons 78

Kainic acid, effect on area postrema 375
Kennard Principle 237
Ketamine induced catalepsy 415

Lateral geniculate nucleus
  afferent/efferent ratios 221
  control of cell number 216
  target control of cell numbers 212
Lateral line system in *Xenopus* 181–206
  accessory organ formation 187
  development 182
  growth 199
  metamorphosis 187
  migration of primordia and primary organ formation 184
  pattern formation 202
  supraorbital 189
Lead intoxication, sodium channels in demyelination 165
Learning and memory formation 277
  glycoprotein synthesis 290
  hippocampal rhythmic slow activity 323
  macromolecule synthesis 283, 295
  methodology 279
  pharmacological improvement 325
  synaptic changes 294
  synaptic long-term potentiation 304, 311
Long-term potentiation
  mechanisms 334, 347
  memory 304, 311, 334
  role of calcium 307
  role of protein kinase C 309, 335
Lysophosphatidylcholine induced demyelination, distribution of sodium channels 166

Medulla oblongata, area postrema 351–390
Melanocyte-stimulating hormone, effect on catalepsy 415
Memory, cellular mechanisms 277–349
  drug effects on disturbances 338
  glycoprotein synthesis 289
  hippocampal rhythmic slow activity 323, 337
  hypothesis 282, 331
  induction of learning related macromolecular synthesis 295
  macromolecular synthesis 283
  methodology 279
  morphological correlated 294
  pharmacological improvement 325
  synaptic long-term potentiation 304, 311, 334
Metamorphosis, lateral line system in *Xenopus* 187
Methylglucamine orotate, effect on memory 326, 338
Methylmercury
  cellular and subcellular localisation 460
  effect on excitatory amino acid receptors 464
  effect on fetal brain cells in culture 455
  effect on fetal brain cells in experimental animals 460
  in fish 448
  hydrocephalus 463
  prenatal poisoning in man 450, 463
  sensitivity of developing brain 449, 452
  target organs for toxicity 448
Minamata disease 450
Monoclonal antibodies
  sodium channels in demyelinated axons 165
  sodium channels in myelinated nerves 160
  sodium channel specific, demyelination induced by 172
Monocular enucleation, cell number control 221
Morphine
  induced catalepsy 411, 415
  taurine interaction 511
Motionsickness 367, 371
Multiple thermostats 104, 112
Muscle, sodium pump in 23

Neocortex plasticity 235–276
  anatomical change and sparing 268
  anatomical consequences of early lesions 247
  behavioural consequences of early lesions 238

Nerve cell bodies, sodium pump 21
Nerve conduction, effect of demyelination 162
Nerve fibres, sodium pump 21
Neurochemical transmission and the sodium pump 11–76
Neurogenic pulmonary edema, role of area postrema 375
Neuromuscular junction, calcium-dependent neurotransmitter release 12
Neuronal migration, effect of methylmercury 455, 456, 460
Neuropeptides, in area postrema 363
Neurotensin induced catalepsy 412, 416
Neurotransmitters
  calcium-dependent release 12
  facilitation and the role of calcium 1–9
  sodium pump and release of 29
Noradrenaline
  in area postrema 361
  calcium-dependent release 15
  influence on behaviour after neonatal cortical lesions 245
  release from human lung 60
  reuptake mechanism 58
  role of internal calcium stores on release 35, 39
  role of plasticity 263
  sodium pump and release of 30
  taurine interaction 509
Noradrenergic–cholinergic interaction, immobility responses 413
Noradrenergic influences on immobility responses 409
Nucleotides in brain, memory formation 325

Opiatergic–catecholaminergic interaction, immobility responses 415
Opiates, role in immobility responses 411
Opioid receptors in area postrema 363
Orotic acid, memory improving action 326
Osmoregulation, taurine 511
Ouabain
  effect on acetylcholine release 29
  evoked catecholamine release 31
  evoked noradrenaline release 30, 39
  inhibition of Na^+-pump 19

Pancreatic polypeptide hormone in area postrema 363
Panic disorder 393
Parabigeminal nuclei, control of cell number 216
Person-centred therapy, anxiety 399
Phenothiazines, anxiety treatment 397
Phobias 392
Phospholipid–calcium–taurine interactions 502
Photoreceptors
  control of cell number 214
  species differences 210
Pimozide, effect on LTP 310
Plasticity in developing brain 237
  anatomical change and sparing 268
  anatomical consequences of early lesions 247
  behavioural consequences of early lesions 238
Posterior parietal cortex lesions
  anatomical consequences 265
  behavioural consequences 244
Post-tetanic hyperpolarization, sodium–pump 21
Potassium
  evoked neurotransmitter release 16
  sodium-pump action 19
  effect on taurine efflux 490
Potassium channels in myelinated axons 161
Potassium currents, effect of taurine 504
Potassium/potassium exchange 20
Potassium–sodium competition 45
Primordial cell migration, *Xenopus* 181, 190
Prolactin, taurine interaction 511
Prostaglandin $F_{2\alpha}$, inhibition of transmitter release in sodium-pump inhibited sympathetic nerve fibres 53
Protein kinase C, role in LTP 309, 347
Protein synthesis, memory 282, 284, 308
Psychotherapy, anxiety disorders 397
Pyknotic cells 215
Pyrimidine nucleotides in brain, memory formation 325

Radiation sickness 367, 371
Rana pipiens, lateral line development 182
Receptive field, properties of thalamic reticular nucleus neurons 90
Recurrent inhibitory circuit, rat thalamus 92
Reflex control 133
Relay neurons, thalamic reticular nucleus 78
  inhibitory actions 92
  setting excitation level 98
REM-sleep, role in memory formation 323, 329, 337
Respiratory control system, role of area postrema 373
Retching 365
Retina
  taurine effects during development 512
  taurine efflux 493
  taurine in 473
  taurine transport 489
Retinal amacrine cells and bipolars, control of cell number 215
Retinal ganglion cells, control of cell number 211, 224
Retina photoreceptors, control of cell number 214
Retinotopic organization, thalamic reticular nucleus 90, 94
Ribonucleic acid synthesis, memory formation 283, 325, 327
Rumination 365

Salicylate evoked emesis 366
Salt regulation, role of area postrema 372
SCH 23390 and 38393, effect on catalepsy 407
Scopolamine, effect on immobility response 408
Sculpting
  lateral geniculate nucleus 216
  retina 214
  superior colliculus 215
  visual cortex 218, 220
Sensory–motor cortex lesions
  anatomical consequences 263
  behavioural consequences 241
Sensory receptors as comparators 132
Sensory stimulation, thalamic reticular nucleus neurons activated by 87

Sex
anatomical consequences of early cortical lesions 267
behavioural consequences of early cortical lesions 246
Skeletal muscle, sodium pump 23
Skin, temperature receptors as thermostats 112, 127
Sleep–wakefulness, role of area postrema 373
Smooth muscle, sodium pump 23
Sodium, effect on taurine transport 488, 493, 494, 495
Sodium–calcium exchange 14, 17, 27
Sodium channels 159–179
in demyelinated axons 162–173
in myelinated axons 160
Sodium currents, effect of taurine 504
Sodium gradient, sodium-pump dependent 58
Sodium–potassium competition 45
Sodium–potassium exchange 20
Sodium pump 12, 18
acetylcholine release 29
α_2-adrenoceptor mediated presynaptic inhibition during blockage 52
calcium action on 48
calcium-independent transmitter release 34
catecholamine release 31
current carried by 27
effector responses to agonists 53
giant axons, nerve fibres, nerve cells and ganglion cells 21
heart, skeletal and smooth muscle cells 23
human experiments 60
noradrenaline release 30
number of sodium ions transported by 27
operation modes 20
prostaglandin $F_{2\alpha}$ action 53
sensitivity to cardiac glycosides 19
sodium gradient created by 27, 58
sodium–potassium competition 45
stoichiometry of uncoupled positive charge 26
Sodium/sodium exchange 20
Somatostatin, taurine interaction 511
Somatotopic organization, thalamic reticular nucleus 89, 94
Space sickness 367
Sparing 237
anatomical change 268
behavioural consequences of early cortical lesions 238
plasticity 270
Squid axons
calcium-dependent neurotransmitter release 12
sodium pump 21
Substance P in area postrema 363
Suncus murinus, emetic pharmacology 365
Superior colliculus, control of cell number 212, 215
Supraorbital lateral line system in *Xenopus* 189
growth 199
innervation of mature organs 193
organ formation and cell differentiation 191
pattern formation 202
primordial elongation and cell migration 190
Surround inhibition, thalamic reticular nucleus neurons 98
Sympathetic nerve terminals, calcium-dependent neurotransmitter release 15
Synaptic changes after learning 294, 314
Synaptic connectivity, intraneuronal regulation, memory 282
Synaptic long-term potentiation, memory 304, 311, 334
Synaptosomes
calcium-dependent neurotransmitter release 16
taurine in 473

Taenia caeci, sodium pump 24
Target control of cell number
retina 212, 226
visual cortex 218
Taurine in CNS 471–533
binding 494
biosynthesis 475
calcium interactions 499
cyclic nucleotide interactions 505
development 512
electrophysiological actions 503, 510
hormone interactions 511
modification of content 497
neurotransmitter interactions 506
osmoregulation 511
release 490
transport 484
Temperature-sensitive neurons, hypothalamus 103–135
model studies 115
thermostats 110
Thalamic reticular nucleus 77–102
firing properties of neurons 80
inhibitory action of relay neurons 92
membrane properties of neurons 81
neural circuits 78
neurons activated by sensory stimulation 87
physiological functions 98
Thalamus, changes following frontal cortex lesions 257
Thermoregulation 104
behavioural 131
model studies 115
thermosensitive neurons as thermostats 110
traditional hypotheses 108
Tranquilizers, anxiety treatment 397
Transference, anxiety 398

Uridine monophosphate, effect on memory formation 326

Vagus lateral line placode 183
Vanadate, evoked noradrenaline release 31
Vasoconstriction/dilation, thermoregulation 131
Vasopressin, role of area postrema in central pressor action 380
Veratridine, effect on catecholamine release 18
Veratrum, emetic action 367
Visual cortex, control of cell number 217
Visual cortex lesions
anatomical consequences 266
behavioural consequences 242
Visual corticothalamic neurons 79
Visual system, cell number control 207–234
afferent and efferent convergence ratios 220, 227

cell death 224
lateral geniculate nucleus development 216
parabigeminal nuclei development 216
retina development 211
superior colliculus development 215
visual cortex development 217
Visual system, insects, acetylcholinesterase in 430
Vomiting
antiemetic drugs 367
area postrema 352
conditioned taste aversion 369
cardiovascular functions 374
emetic agents 365
motion sickness 367
radiation sickness 367
reflex nature and central coordination 364
species differences 364

Warm-sensitive neurons in hypothalamus 105

Xenopus, development of lateral line system 181–206

INDEX

AII, prolactin releasing factor 407
Acetylcholine
  co-existence with calcitonin gene-related peptide 377
  induced depolarization in glial cells 320
  role in segmental spinal transmission 268
Acidosis, induced swelling in astrocytes 319
Adenosine, role in segmental spinal transmission 267
Na^+,K^+-Adenosine triphosphatase, in glial cells 317
Adipose tissue, adrenergic nerve fibres in 141
Adrenal nerve, blood glucose levels and activity in 137
Adrenergic nerve fibres, in adipose tissue 141
Adrenocorticotropic hormone, nerve development and regeneration 45–85
  clinical implications 75
  CNS regeneration 71
  dosage and administration 49
  growth factor characteristics 73
  localisation in neural tissues 46
  peptide fragments 47
  peripheral nerve development 54
  peripheral nerve regeneration 64
  precursor localisation and processing 46
  release of peptides 47
  specificity vs non-specificity of peptides 72
  structure–activity relationships 48
D-Ala^2,D-Leu-enkephalin, effect on respiration 6, 7, 10
(D-Ala^2-MePhe^4-Gly-ol)-enkephalin, effect on respiration 7, 10
Amino acids, in liver, neural control 144
γ-Aminobutyric acid
  depolarisation in glial cells 319
  modulation of segmental spinal transmission 263
  neuronal–glial signal for ion homeostasis 325
  prolactin inhibiting factor 410
(+)-2-Amino-4-phosphonobutanoate 264
Ammon's horn 179, 182
Amniotic fluid, prolactin in 418
Amygdaloid complex
  calcitonin gene-related peptide in 346
  parahippocampal connections 202
Analgesia, opioid receptors 10
Anterior pituitary
  age-related changes 418
  dopamine in 401
  lactotrophs 428
Anterograde tracing, parahippocampal region 169
Anticipatory muscle tone 284
Aortic chemoreceptors 3
Arginine vasopressin, effect on prolactin release 413
Association cortex, parahippocampal area 163
Astrocyte cultures 311
Auditory system, calcitonin gene-related peptide fibres in 368
Autonomic nervous system
  calcitonin gene-related peptide in 372, 377
  regulation of metabolism 135–147
Axonal growth, regeneration 109
Axonal guidance, tubulization 103
Axonal transport, nerve regeneration 63
  ACTH peptides 66

B-50, phosphorylation and ACTH peptides 69
Baclofen 264
Baroreceptors 5
Basal ganglia, parahippocampal connections 208
Behaviour, parahippocampal lesions 241
Biassing 293
Bladder, calcitonin gene-related peptide in 365
Blood flow, cerebral, schizophrenia 23
Blood glucose, neural control 136
Blood vessels, calcitonin gene-related peptide in 358
Bombesin, effect on prolactin release 413
Bradykinin, effect on prolactin release 414
Brain stem, parahippocampal connections 221
Breathing, sensory inputs 2
Brown adipose tissue
  adrenergic nerve fibres 141
  heat production 142

Calcium, mediator of K^+ currents 324
Calcium channels, glial cell membranes 316
Calcitonin gene-related peptide 335–386
  binding sites in brain 345
  in central nervous system 337
  co-existence with other neuroactive substances 354, 377
  fiber connections containing 345
  ontogeny 376
  in peripheral nervous system 353
  in plasma 372
Capsaicin 260
Carbonic anhydrase, in glial cells 318
Carotid chemoreceptors 3, 6
Cell assemblies 283
Cell migration, nerve tubulization 103
Cerebellum
  calcitonin gene-related peptide system in 349
  glial cells and ion homeostasis 322
  metasystemic control 296
  task-related responsiveness 295
Chemoreceptors
  central, respiration 4
  pulmonary 3
Chemotaxis, opioid peptides and immunity 150, 152
Chloride channels, glial cell membranes 315, 317, 324
Chloride–HCO_3^- exchange, in glial cells 317, 325
2-Chloroadenosine 268
Chlorpromazine, schizophrenia treatment 21
Cholecystokinin, effect on prolactin release 413
Cisplatin-induced neuropathy 76
Claustrum, parahippocampal connections 207

Cochlea, calcitonin gene-related peptide fibres in 350
Cold, effect on fat metabolism 141
Collagen, nerve tubulization 96
Commissural connections, entorhinal cortex 182
Compound action potential, nerve tubulization 117
Computerized tomography, schizophrenia 19, 28
Conditioning 283
Conduction velocity, nerve tubulization 117
Contingent negative variation 393
Corpus callosum, schizophrenia 24
Coughing 3
Cutaneous transmission 293

Dentate gyrus, entorhinal projection to 175
Development
  calcitonin gene-related peptide 376
  prolactin secretion 417
Diabetic polyneuropathy 76
Distal nerve stump factors 121
Dopamine
  inhibitor of prolactin release 400
  effect on segmental spinal transmission 265
Dopamine agonists, induced hypoprolactinemia 427
Dopamine antagonists, induced hyperprolactinemia 425
Dopamine receptors, anterior pituitary 403
Dorsal horn neurons, excitatory responses 259, 266
Dynorphin 267

EEG, human odor response 388
Electromagnetic fields, nerve regeneration 98
β-Endorphin
  involvement in respiration 5
  modulation of immunocompetent mammalian cells 150
  effect on prolactin release 412
Enkephalins
  effect on immunocompetent cells 150
  effect on respiration 6, 10
Entorhinal cortex 163
  Ammon's horn 179
  basal ganglia connections 208
  brain stem connections 221
  claustrum connections 207
  cortical relations 184, 238
  dentate gyrus 175
  hypothalamus connections 220
  intrinsic connectivity 222
  microcircuitry 233
  sensory and parasensory connections 186
  septal connections 198
  subdivisions 168
  subiculum 180, 183
  thalamus connections 212
Esophagus, calcitonin gene-related peptide in 361
Estradiol, effect on prolactin release 415
Estrogens, hypoprolactinemia 424
Event-related olfactory potentials 391
Evoked potentials, odor response 391
Excitatory amino acids 256
  C fibre transmitters 260, 263
  depolarisation in glial cells 319
Excitotoxic cell loss 24
Executive neurons 299
Eye, calcitonin gene-related peptide in 366

Fascicles, nerve regeneration 109
Fast Fourier Transform 388, 391
Fasting, effect on fat metabolism 141
Fat metabolism, neural control 140
Fatty acids in plasma, neural control 141
β-Funaltrexamine 11
Fusimotor modulation of stretch reflex gain 291
Fusimotor set 289

Gain control 293
Galanin 258, 413
Galaxolide 393, 395
Gangliosides, nerve injury 75
Gastrin, effect on prolactin release 413
Gastrointestinal inputs, regulation of blood glucose levels 138
Gastrointestinal tract, calcitonin gene-related peptide fibres in 358
Gingiva, calcitonin gene-related peptide in 358
Glial cells
  cultured 311
  electrical responses to external signals 319
  extracellular ion and volume changes 322
  ion carriers and enzymes 316
  ion channels 315
  ion regulation by 323
  K^+ loading 327
  physiological properties 313
  regional membrane specializations 321
  schizophrenia 33
  taurine and lactate 321
  vascular interactions 328
  volume regulation 318
Glucagon secretion 136
Glucose
  in blood, neural control 136
  utilization in brain, schizophrenia 23
Glutamate
  induced depolarization in glial cells 319
  induced swelling in astrocytes 318
  neuronal destruction 24
Glutamine synthetase, in glial cells 318
Gonadotropin releasing hormone associated peptide 410
Growth-associated peptides, regenerating nerves 64
  ACTH effects 69
Growth cones 104
Growth factors 72

Heart, calcitonin gene-related peptide fibres in 357
Heat production, neural control mechanisms 142
Hippocampal formation 163
  laminar organisation 165
  topography 164
Hippocampal–parahippocampal axis 172
Histamine, effect on prolactin release 413
H^+-lactate cotransport, glial cells 317
5-Hydroxytryptamine
  depolarisaton in glial cells 320

effect on prolactin secretion 411, 422
effect on segmental spinal transmission 265
Hyperprolactinemia 424
Hypoprolactinemia 427
Hypothalamic neurons, role in blood glucose homeostasis 137
Hypothalamo–septal projections, calcitonin gene-related peptide in 345
Hypothalamus
prolactin inhibiting factors in 411
prolactin releasing factors in 406
Hypoxia, peripheral chemoreceptors 3, 6

Immunoregulation, role of opioid neuropeptides 149–159
Inflammation, nerve regeneration 100
Insulin secretion 136
Internodal length, nerve tubulization 113
Intestine
calcitonin gene-related peptide in 361
glucoreceptors 139
vagal receptors sensitive to lipids 143
Intralaminar nuclei 220
Invertebrates
opioid neuropeptides in immunoregulation 151, 155
state-dependence of reflexes 288
Ion carriers, glial cells 316
Ion channels, glial cell membranes 315
Ion homeostasis in CNS 310
Ion microenvironment, role of glial cells 309–333
Irritant receptors, breathing 3

Kainate receptors, primary afferent C fibres 264
Kappa agonists 267

Lactate, role in glial swelling 321
Lactation, hormonal interactions 421
Lactotrophs
anterior pituitary 428
development 417
reproductive cycle and pregnancy 419
Laminin, nerve tubulization 96, 120
Laterodorsal nucleus 220
Leukocytes, effect of opioids 150
Limbic brain, parahippocampal region 162, 184
Lipid metabolism, neural control 140
Liver
calcitonin gene-related peptide in 365
regulation of blood glucose 137, 140
Liver regeneration, neural control 144
LOBEX 402, 408
Locus coeruleus 222
Lung
calcitonin gene-related peptide in 366
sensory inputs influencing breathing 2
Lymph nodes, calcitonin gene-related peptide in 367

Mammillary nuclei 221
Melanocyte-stimulating hormone
administration 50
in degenerating and regenerating nerves 69
neurotropic effects 50
precursor localisation and processing 46
prolactin release 414
release of peptides 47
Melatonin, effect on prolactin release 413
Memory, parahippocampal lesions 241
Meptazinol, respiratory effects 12
Metasystemic control by cerebellum 296
Methylamphetamine, neuronal damage 24
Morphine, respiratory depression 5
Motor behaviour, ACTH effects 55
Motor neuron disease, ACTH peptide treatment 76
Motor neurons, calcitonin gene-related peptide in 371
Motor systems, sensorimotor gain control 281–307
Muller cells, ion homeostasis 321
Multiple sclerosis, ACTH peptide effects 76
Muscle
ACTH peptides 55
calcitonin gene-related peptide in 371
neonatal maturation 53
state-dependency of reflexes 284
Myasthenia gravis, ACTH peptide effects 76
Myelination, nerve tubulization 109, 113

Naloxone
effect on prolactin release 412
effect on respiration 5, 10
Natural killer cells, effect of opioids 151
Nerve growth 53
ACTH peptides 54
Nerve Growth Factor 120
Nerve regeneration 58
ACTH peptides 50, 64
tubulization 87–134
Nerve transplants 89
Nerve trauma, ACTH peptide therapy 75
Nerve tubulization 87–134
abnormalities 117
axonal guidance 103
electrophysiology 117
growth and trophic factors 119
historical development 88
morphology 98
myelination 109
regeneration 100
techniques 90
Nervous regulation of metabolism 135–147
blood glucose 136
fat 140
protein 143
Neurite-promoting factors 120
Neurocognitive pattern analysis 396
Neurokinins A & B 258
Neuroleptic drugs, schizophrenia 20, 26
Neuromuscular development 53
ACTH peptides 55
Neuronal organization, schizophrenia 32
Neuronotrophic factors, tubulization 119
Neuropathy, ACTH peptide therapy 76
Neuropile glial cells, leech 312, 320
Neurotensin, effect on prolactin release 413
NK-2 receptor 258
NMDA receptor, spinal cord 256, 260, 262
Nociception, capsaicin sensitivity 262
Noradrenaline
depolarisation in glial cells 320

effect on segmental spinal transmission 265
Nucleus tractus solitarius, glucose-responsiveness neurons in 138

Odor response, human EEG 387–398
cognitive negative variation 393
processing models 394
Olfaction and EEG 387–398
Olfactory area, parahippocampal connections 186
Olfactory system, calcitonin gene-related peptide in 366
Oligodendrocyte cultures 311
Opioid peptides 149
modulation of immunocompetent invertebrate hemocytes 151
modulation of immunocompetent mammalian cells 150
modulation of segmental spinal transmission 267
effect on prolactin secretion 412
respiration 5
Opioid receptors
brain, involvement in respiration 5, 6
invertebrate immunocytes 155
lung 6
mammalian cells 152
Optic nerve, astrocyte swelling during neuronal activity 323
Oral inputs, regulation of blood glucose 138
Org 2766 49
effect on motor behaviour 56
nerve regeneration 65
Oxytocin, prolactin releasing factor 407

Pancreas
calcitonin gene-related peptide in 365
effect of nerve stimulation 136
Parabigeminal nucleus 346
Parabrachial area 346
Parahippocampal region 161–253
amygdaloid complex connections 202
anatomical organisation 169, 238
basal ganglia connections 208
behavioural effect of lesions 241
brain stem connections 221
claustrum connections 207
cortical relations 184
definition of areas 163
electrophysiology 240
hippocampal axis 172
hypothalamus connections 220
microcircuitry of entorhinal cortex 234
regional and intrinsic connectivity 222
septal connections 198
thalamus connections 212
tract-tracing 169
Parkinson's disease 287
ACTH peptide effects 76
Perirhinal cortex 177, 182, 184, 216, 224
Permissive neurons 299
pH regulation, glial cells 325
Phaclofen 264
Phenothiazines, schizophrenia treatment 21
Pituitary tumours, hyperprolactinemia 424
Polymorphonuclear leukocytes, effect of opioids 150
Posterior pituitary, prolactin releasing factors 407, 423
Potassium
calcium interaction 324
carriers and enzymes in glial cells 316
glial permeability 313, 320, 325
glycogen stores in astrocytes 326
homeostasis in CNS 310
induced swelling in astrocytes 318
loading and glial cell function 327
retinal glial cells 321
spatial buffering or siphoning 323, 326
Potassium channels, glial cell membranes 315
Pregnancy, prolactin 419
Pressure neuropathy 76
Primary afferent C fibres
capsaicin 260
excitatory amino acids 260, 263
5-HT and noradrenaline 265
nociception 262
opioids 267
transmitters released from 257
Progesterone, effect on prolactin release 415
Progressive spinal muscular atrophy, ACTH peptide treatment 76
Prolactin release 399–447
anterior pituitary lactotrophs 428
autoregulation 414
development 417
dopamine inhibition of release 400
estradiol effects 415
hyperprolactinemia 424
hypoprolactinemia 427
lactation 421
neuropeptides and neurotransmitter involvement 410
progesterone effects 416
releasing factors 405
reproductive cycle and pregnancy 419
Proprioception, descending control of 289
Proprioceptive transmission 293, 294
Protein metabolism, neural control 143
Puberty, prolactin 418, 419

Raphe nuclei 221
Readiness 292
Reflexes
fusimotor modulation 291
state-dependence 284, 288
Regenerating liver, neuronal control 144
Regenerating nerve 58
ACTH peptides 64
tubulization 87–134
Regeneration promoting factors 121
Reproductive cycle, prolactin 419
Respiration 1
endogenous opioid peptides 5
opioid receptors 6
pattern generator 2
sensory inputs 2
Respiratory depression, opioids 2, 10
Respiratory tract, calcitonin gene-related peptide in 366, 376
Retina
calcitonin gene-related peptide in 353
glial cells 312, 321

Retrograde tracing, parahippocampal region 169
Rhythmical movements, modulation of spinal reflexes 287
Rhythmic Slow Activity 201

Schizophrenia 17–44
  cranial size 31
  CT scanning 19, 28
  developmental degenerative disorder 27, 28, 32
  EEG 23, 26, 37
  excitotoxic cell loss 24, 25
  genetic factors 31
  heterogenous disorder 37
  neuroleptic treatment 20
  neuronal activation 22, 24
  neuronal deficit 32
  neuropathological studies 32
  perinatal complications 31
  progressive illness 19
  symptoms 18
  ventricular enlargement 28, 31
  Weinberger's neurodevelopmental hypothesis 36
Schwann cells, nerve regeneration 120
Segmental spinal transmission 255–279
  acetylcholine 268
  adenosine 267
  capsaicin 260
  C fibre primary afferent input 259
  excitatory amino acids 260, 263
  5-HT and noradrenaline 265
  opioids 267
  tachykinins 257
  transmitters of myelinated primary afferent fibres 255
  in vitro preparations 268
Sensitization 283
Sensorimotor gain control 281–307
  biassing 293
  cerebellum 295
  cutaneous transmission 293
  descending control of proprioception 289
  hybrid control 300
  proprioceptive transmission 293, 294
  readiness 292
  set 282, 298
  state-dependence of invertebrate reflexes 288
  state-dependence of mammalian reflexes 284
Sensory cortex, parahippocampal connections 186
Sensory neurons, calcitonin gene-related peptide in 353
Septal–hippocampal connectivity 198
Set 282, 298
  fusimotor 289
  single unit 292
Sexual maturation, prolactin 418
Silastic, nerve tubulization 95, 98
Skin, calcitonin gene-related peptide in 367
Sodium
  H^+ exchange in glial cells 317, 325
  HCO_3^- cotransport in glial cells 318
  transmembrane cycle, glial cells 323
Sodium channels, glial cell membranes 315
Somatomammotroph cells 430
Spantide 259
Spasticity 287
Spatial buffering, glial cells 323, 326
Spinal cord, segmental transmission 255–279
Spinal reflexes, modulation during rhythmical movements 287
Splanchnic nerve, stimulation and liver and pancreas function 136
Splenocytes, opioid binding sites 152, 155
State-dependent reflexes 284, 288
Stomach, calcitonin gene-related peptide in 361
Stretch-activated ion channels, astrocytes 316
Stretch receptors, breathing 3
Stretch reflex gain, fusimotor modulation 291
Striatum, parahippocampal connections 208
Subiculum 180, 183, 222
Substance P
  primary afferent C fibres 258
  effect on prolactin release 413
Suckling, hormonal interactions 422, 424
Sudden infant death syndrome 5
Supramammillary nucleus 220
Sympathetic nervous system, role in fat metabolism 142
Synapse formation 53
  ACTH peptides 55
Synaptic excitation, C fibre primary afferent input 259
Synaptic plasticity 283

Tachykinins 257
  antagonists 259
Taste stimulation, blood glucose levels 138
Taurine, gliotransmitter 321
Teeth 358
Telencephalic cortex, subdivisions 163
Thalamus, parahippocampal connections 212
Thyroid, calcitonin gene-related peptide in 367, 372, 376
Thyrotropin releasing hormone, prolactin secretogogue 406
Tongue 361
Tract-tracing, parahippocampal region 169
Trauma, nerve regeneration 100
Tuberohypophysial dopamine 401
Tuberoinfundibular dopamine 401, 414
Tuberomammillary nucleus 221
Tubulization, nerve regeneration 87–134
Type-J receptors, breathing 3

Urinary tract, calcitonin gene-related peptide in 365
Uterus, calcitonin gene-related peptide in 365

Vagus nerve, effect on liver and pancreas function 136
Vasoactive intestinal polypeptide, prolactin releasing factor 406
Vasopressin associated glycopeptide, prolactin releasing factor 408
Vasotocin, effect on prolactin release 413
Ventral tegmental area 221
Ventricular enlargement, schizophrenia 28
Vestibular system, calcitonin gene-related peptide fibres in 350, 368
Volume regulation, glial cells 318, 325
